Alternatives

Temperature vs. Altitude

Temperature vs. Air Pressure

Altitude vs. Air Pressure

Design Brief

What is the temperature and pressure variation in the lower atmosphere. We will send up a balloon and as it rises we will measure temperature and air pressure. We think air pressure will increase as temperature decreases

PDS

Some problems we are facing right now are deciding on a team name and how to record data. We don't know how we are going to record our data because we are not sure how to get our materials to work yet, or how to get them all together.
